

IT Setup & Technical Onboarding Guide

Step-by-step instructions for hardware, corporate credentials, VPN, and security tools

1. Company Email & Account Setup

Your company email account and Single Sign-On (SSO) profile are provisioned 3 business days before your start date. Your official email address follows the standard corporate format: **firstname.lastname@company.com**. To activate your account, navigate to <https://identity.company.com> and enter your temporary login credentials provided in your welcome email.

2. Laptop Hardware & Device Enrollment

New hires receive either an Apple MacBook Pro 14" (Apple Silicon) or Lenovo ThinkPad T14 (Windows 11). When turning on your laptop for the first time:

- Connect to a stable high-speed Wi-Fi network.
- Follow the Automated Device Enrollment screen (Jamf for macOS, Microsoft Intune for Windows).
- Log in with your company email credentials to apply security policies and corporate software profiles automatically.
- Full-disk encryption (FileVault on macOS, BitLocker on Windows) is automatically activated and cannot be disabled.

3. Multi-Factor Authentication (MFA) Setup

MFA is mandatory on all corporate accounts and applications. During your initial login at <https://identity.company.com/mfa>:

- Download and install **Okta Verify** on your mobile device (iOS App Store or Google Play Store).
- Scan the on-screen QR code to bind your mobile device to your Acme SSO account.
- Enable biometric approval (Face ID / Fingerprint) and push notifications for seamless one-tap login authentication.

4. Virtual Private Network (VPN) Setup

A secure VPN connection is required to access internal corporate networks, development databases, and private git repositories when working remotely.

- Open the pre-installed **Cisco AnyConnect** (or GlobalProtect) application on your corporate laptop.
- In the server address field, enter: **vpn.company.com**
- Click 'Connect' and enter your Acme email and password when prompted.
- Approve the push notification on your Okta Verify mobile app to establish the encrypted tunnel.

5. Password Requirements & Password Manager

All corporate user accounts must strictly adhere to the following password policy requirements:

- **Minimum Length:** Must be at least 14 characters long.
- **Complexity:** Must contain at least one uppercase letter (A-Z), one lowercase letter (a-z), one numeral (0-9), and one special character (!@#\$%^&*).
- **Expiration:** Passwords must be changed every 90 days.
- **History:** You cannot reuse any of your previous 6 passwords.
- **Password Manager:** Acme provides an enterprise license for **1Password**. Store all work credentials in 1Password; never store passwords in plaintext or in web browsers.

6. Approved Collaboration & Software Tools

Your machine comes pre-configured with the standard corporate software suite:

- **Communication:** Slack (channels #general, #announcements, #helpdesk) and Zoom.
- **Productivity:** Google Workspace (Gmail, Docs, Drive, Calendar) and Microsoft 365.
- **Project Management:** Jira, Confluence, and GitHub Enterprise.

7. IT Support & Helpdesk Contact Info

If you experience technical issues, hardware faults, or account lockouts, contact IT Support through any of the following channels:

- **Helpdesk Portal:** <https://helpdesk.company.com> (Submit tickets & track resolution)
- **Email Support:** it-support@company.com (Response within 2 hours during business hours)
- **Slack Channel:** #it-helpdesk (Quick questions and live engineer support)
- **Support Hours:** Monday through Friday, 8:00 AM – 6:00 PM EST
- **Emergency IT Hotline:** 1-800-555-0199 (Available 24/7 for urgent access issues)

***IT Tip:** Keep your laptop plugged in and connected to Wi-Fi on your first night so mandatory system updates and security patches install without interrupting your workday.*
